## US MODEL

**US Model:** remains very content with an aggressive bullish status. Model Portfolio 137% net long. Overweight sectors: Technology, Industrials, Discretionary, Health Care and Staples. Model Indicators (charts below) have confidently embraced bullish trends that are strong enough to remain intact for some time. Many, many new buy signals are expected but since the Portfolio is fully invested these buy signals will serve as supporting an aggressive bullish status and help the Model Indicators further extend their bullish trends. Recommend maintaining aggressive positions in favored stocks below as well as in overweight sectors.
